

QUICKSTART SERVICES

QuickStart is intended for agencies that have purchased DefenseReady and need to deploy quickly. QuickStart helps agencies achieve Initial Operating Capability (IOC). The end goal of QuickStart is to “go-live” with the DefenseReady application.

Workflow

Working closely with key agency stakeholders, Permuta offers several QuickStart deliverables that help the agency achieve IOC:

- Kickoff Meeting
- Gap Analysis
- Site Survey
- Installation
- Project Charter
- Configuration*
- Customization*
- Application Acceptance Testing*
- End User Training*
- Data Import*
- Data Acceptance Testing*
- Go Live

**Please note: several of the project phases are limited in scope. Permuta will deliver support in each of these phases depending on engagement hours and timeline.*

Permuta’s skilled and experienced team members execute each phase of the project workflow. To provide its customers with end-to-end support during complex projects, Permuta structures its account teams to ensure a balance of technical expertise, conflict resolution, and always-on customer service when delivering the proven DefenseReady solution.

Benefits

RAPID INSTALLATION: With QuickStart and DefenseReady, organizations can realize the first phases of IOC in a matter of weeks or months. Once the solutions are operational, Permuta tailors the applications to meet agency needs.

ON-DEMAND: Permuta does not provide staff augmentation, but rather operates in an on-demand model that cuts management costs. Permuta’s experts engage in the project only when required, ensuring that customers receive the highly-specialized expertise they need to get the job done quickly.

EXPERTISE: Permuta understands its customers’ challenges because the majority of its employees have extensive Defense backgrounds. This understanding is why Permuta’s services differ from traditional contractor engagements.
